

QMSoutsource and Junot Systems Announce Alliance ***QMSoutsource Adds SAP Integration Capability***

Houston, June 19, 2007 – Junot Systems, Inc., a leading provider of embedded SAP integration solutions for the manufacturing and process industries and QMSoutsource, Inc., a provider of end-to-end solutions for Quality Management, today announced that they have signed a letter of intent to integrate the QMSoutsource “Safety In Your Hand” handheld system with SAP® R/3® and mySAP® using Junot Systems’ patented and SAP-certified NLINK® product suite.

QMSoutsource’s “Safety In Your Hand” handheld system helps companies manage all the safety requirements for their statutory, regulatory and ISO Standards. Available both on the Internet as a Software as a Service (SaaS) offering or as a standalone program deployed in-house, it can be seamlessly integrated with SAP to enable the Work Clearance Management (WCM) Module and Work Notifications / Orders combination for a handheld delivery.

“The QMSoutsource system revolutionizes Quality Management by integrating the 'Best Practices' of the Deming Cycle (of Plan, Do, Check and Act) within the combination of a portable, handheld unit and a powerful Internet/Intranet database application,” explained Jeffrey Lewis, President of QMSoutsource. “One of the key success factors to this capability in a large organization is the ability to provide a cost-effective, seamless and real-time integration to their SAP systems, where much of their enterprise data is stored. NLINK has provided us with an excellent means to achieve this goal.”

“QMSoutsource had strict requirements for the technology that was to be used in their SAP integration solution,” said Peter Slater, President and CEO of Junot Systems. “Their needs demanded the use a field-proven, SAP certified solution that could provide real-time integration to a number of SAP modules across a broad range of SAP releases. NLINK’s successful ten year deployment history and Junot Systems’ in-house depth of SAP integration technology was a natural fit. We’re looking forward to working with QMSoutsource.”

Using their patented NLINK technology, Junot Systems, Inc. has developed a series of affordable, shrink-wrapped SAP integration solutions that allow companies to connect their plant floor to their SAP systems faster, with reduced risk and at a lower delivered cost than would otherwise be possible. Fast to implement and easy to change, NLINK’s reliable, scalable, flexible and manageable integration solution sets enable companies to remove the risk and delay associated with traditional SAP integration projects.

About Junot Systems:

Headquartered in Houston, Texas, Junot Systems, Inc. has deployed and supported its NLINK product suite for 10 years in a variety of vertical markets, both in the US and overseas. Junot’s integration specialists developed the patented NLINK product to significantly reduce the time and expense of integrating complex business applications. For more information on Junot Systems, and the NLINK product suite please visit the Junot Systems corporate web site at www.junotsystems.com.

About QMSoutsource:

QMSoutsource provides end-to-end solutions for Quality Management. QMSoutsource developed its proprietary software to harmonize the related Standards through 'Safety In Your Hand'. The software integrates elements of the Standards with the regulatory / statutory practices to dovetail into Maintenance Management format. Outside the core manufacturing process, the harmonization of Safety and Maintenance Management at the point of application improves workflow to enhance efficiency and effectiveness when the program is used.
